Site 2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with ECoR I adaptor, digested with NotI and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is AGCGAGACAG. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

/clone library was constructed with the SuperScript Plasmid System with Gateway Technology kit (Invitrogen), following manufacture's protocols. Plasmid DNA was purified using a modified alkaline lysis method. Sequencing reactions were conducted using the DYBnamic Cycle Sequencing reactions were manufacturer's recommendations. Clones were sequenced by the 5' end with T7 primer. Sequencing reactions were highly conducted with and conducted sequenced by the 5' end with T7 primer. Sequencing reactions were highly conducted by the form with the conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted conducted c

Low quality bases (Phred score < 20) were trimmed from both ends of the sequence by an in-house script. This sequence is vector free and at least 200 bp in length. Fun by PHS grant # RO1 NSO45264, 'Songbird Neurogenomics Initiative. PCR PRimers

                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vector Trimming: Cross_match from Washington University Genome Center PHRAP suite. Low quality bases (Phred score < 20) were trimmed from both ends of the sequence by an in-house script. This sequence is vector free and at least 200 bp in length. Funded by PHS grant # ROI NSO45264, 'Songbird Neurogenomics Initiative.'

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
This is the 5' sequence of the clone insert clone from S. Wiemann
Molecular Genome Analysis, German Cancer Research Center (DKFZ);
Email s.wiemannadkfz-heidelberg.de; sequenced by Qiagen
(Hilden/Germany) within the cDNA sequencing consortium of the
German Genome Project. This clone (DKFZP6949H132) is available at
the RZPD in Berlin. Dease contact the RZPD; Ressourcenzentrum,
Heubnerweg 6, 14059 Berlin-Charlottenburg, GERWANY; Email:
clone@rzpd.de Further information about the clone and the
sequencing project is available at
